

“We finally found a single tool to control our fleet,

everything from location to inventory of parts, labor and more... Borg Fleet provides us with all of the information we need to stay in top operational order while at the same time providing our accounting department with the reports needed to run our operation as profitably as possible.”

Henry Quiñonez, Vice President of Sales, Casco

Flexible Solutions for Intelligent Fleet Control

You need software that fits your business – not the other way around. That’s why BorgSolutions provides Borg Fleet™, a modular, easy-to-use fleet intelligence platform for maintenance and tracking.

Borg Fleet gives companies the flexibility to support their fleet maintenance management needs as these continue to grow and evolve while automating data gathering via a variety of telematic terminals.

As a result, Borg Fleet predictive maintenance minimizes asset down time, decreases breakdowns, allows crews to spend their time working on the job, etc. All of which saves you money.

Choose the Solution That’s Right for You

With Borg Fleet, you can choose the solution you need, when and where you need it – whether in the field, in the shop or back office. Borg offers three options:

- **Maintenance with integrated telematics:** Borg Fleet ensures a global view of all activities occurring between the field and home operations. The result is a proven, flexible way to drive down costs while increasing efficiency, productivity and ROI on vehicles and equipment.
- **Automated maintenance:** based on asset usage patterns and parts preference, Borg Fleet accurately predicts up to 90-days in advance when service will be needed. Not only does it predict and flag for the fleet manager, but it also tells him what parts are needed, if those are in stock, and populates both work and purchase orders as needed.
- **GPS tracking:** Borg GPS, the Company’s global positioning product, leverage state-of-the-art tracking applications and industry standards, which empower companies to accurately and securely track vehicles and other mobile assets through a single interface.

Your Benefits with Borg Fleet

With BorgSolutions, flexibility is key. Borg Fleet ensures business-critical flexibility through a broad range of strategies, options and capabilities:

Web-based services. Borg Fleet is a web-based, software as a service. This means that users can access the secure application and receive Borg Fleet software as a service from any computer connected to the Internet. In addition, Borg Fleet requires no hardware purchases and is customizable to a company's specific requirements.

Extensive scalability. Because Borg Fleet is web-based, a company can add an almost unlimited number of units or assets without having to pay more in fees, install new software or change their existing computer systems.

Industry-specific solutions. Borg Fleet solutions can address the business, technical, environmental and regulatory demands of a broad range of industries, including construction, government, rental and fleet services industries.

Customizable settings and configurations. Users can set specific alerts for scheduled maintenance. Managers can assign, organize and work according to resources and demand. Owners can configure and provide new services based on business needs, trends and customer requests.

Broad hardware component support. Borg Fleet supports a wide range of telematic hardware devices, like GPS, for both on-road vehicles and off-road heavy equipment. Options are also available for cellular, satellite or WiFi-based communications.

Enhanced theft control with variable geofences. With the GPS option, users can erect 24/7 electronic geofences around company equipment. Fences can vary in size and shape, depending on a site's location, boundaries and security needs.

Flexible multi-language support. Interfaces and support services are available in English, Spanish, French, German and other languages.

Your choice of training options. Each new customer is trained by our staff via the web or in person, depending on the customer's needs or requirements.
